CAREER OBJECTIVE

Aspiring AI Engineer with hands-on experience in Python, software development, data analysis, and machine learning-based projects. Strong foundation in DSA, OOP and problem solving, with practical experience building applications and working with data. Currently strengthening skills in Machine Learning with Python and exploring AI technologies, with a strong interest in LLMs and Generative AI.

EDUCATION QUALIFICATION

B.E. Computer Science & Engineering 2026

Dr. N.G.P. Institute of Technology

CGPA: 8.68 / 10

HSC 2022

Sri Chaitanya Techno School
Marks: 438 / 500 (87.6%)

SSLC 2020

Vidyaa Vikas International School
Marks: 450 / 500 (90%)

SKILLS

- Programming Languages: Python, Java, C
- AI & Machine Learning: Machine Learning, NumPy, Pandas, Seaborn
- Core Concepts: DSA, OOP, DBMS, Problem Solving
- Web Development: React JS, Django, HTML, CSS
- Databases: MySQL, SQLite, Firebase
- Tools & APIs: Git, GitHub, REST APIs

PROJECTS

EnergyMate — Smart Energy Monitoring System

Python, Deep Learning, Seq2Point CNN, React JS, Firebase

- Developed the energy monitoring dashboard to visualize appliance-level consumption and compare predicted versus actual power usage from the NILM model.
- Contributed to the research documentation and IEEE conference paper, presenting the system architecture, methodology, model evaluation, and energy monitoring workflow.
- Documented and presented the NILM-based energy disaggregation system, which achieved an MAE of 12.6 W in the reported evaluation and supported appliance-level consumption analysis.

Buyoganic — Full-Stack Recycling & Eco-Products Platform

Django, Python, PostgreSQL, HTML, CSS, JavaScript

- Developed a full-stack platform connecting plastic-waste generators, recyclers, and bio-product makers, enabling waste collection and recycling through a unified platform.
- Built PlastiCycle for truck tracking and scheduled waste collection, and Re-Gen Market to manage collected plastic categories and support the recycling workflow.
- Developed Eco-Choice Hub for discovering and ordering eco-friendly products, integrating Django and PostgreSQL. The project received a ₹90,000 UBA government grant.
- https://buyoganic.pythonanywhere.com

Shishu Aagaar — Newborn Care & Education Platform

React JS, Django, SQLite, Android Studio, Netlify

- Developed a newborn-care education app for first-time mothers, combining detailed guidance with animated videos to make newborn-care practices easier to understand.
- Built regular baby health-monitoring forms for mothers to record newborn details, which were reviewed by a nursing student to support informed follow-up.
- Deployed the web application on Netlify and converted it into an Android APK using Android Studio; tested with 40 mothers under nursing-student supervision.

MediCare — Healthcare Operations & Revenue Analytics

MySQL, SQL, Data Cleaning, Database Management

- Created a MySQL database from Excel source data, designing tables, inserting records, and establishing relationships using primary and foreign keys.
- Performed data profiling and cleaning by identifying duplicates, nulls, inconsistent values, date formats, and billing/payment data issues across healthcare records.
- Analyzed healthcare operations and revenue data using SQL joins, filters, and aggregate queries to answer BRD-based business questions and generate actionable insights.

DATA ANALYTICS TRAINING

Data Analyst Course — Anudip Foundation Aug – Nov 2026 (Ongoing)

- Worked on Medicare and HealthPlus datasets using SQL to clean and validate data, handling null values, duplicates, inconsistent values, date formats, and incorrect records, followed by data analysis using queries, joins, and aggregate functions.
- Worked on Freshmart, Trendkart, and Novitech datasets using Excel and Power BI to clean and transform data, create PivotTables and KPIs, analyze sales, profit, production, defects, and other business metrics, and build interactive dashboards with charts, slicers, and visualizations.

INTERNSHIPS

Software Development Intern — Cura Feb – Sept 2025 (8 months)

- Developed and enhanced real-time health-tracking and alert modules for a patient-monitoring platform.
- Worked on retrieving, displaying, and updating application data while contributing to user-focused features and overall application usability.

Frontend Development Intern — Pinesphere Solutions Mar – Apr 2024 (1 month)

- Developed frontend features for the Shishu Aagaar child health and nutrition application using React JS.
- Implemented component-based interfaces for infant growth tracking and baby-care information.

Project Intern — Pinesphere Solutions Jul – Aug 2023 (10 days)

- Developed a Django-based web application to record and track recycling and waste-collection data.
- Worked with Python and Django to implement backend functionality and support full-stack application development.

CERTIFICATIONS & ACHIEVEMENTS

- NPTEL Cloud Computing — Elite + Silver Certification, scored 86% (Top 5% of candidates).
- Design Patent — Wireless Touch Laser Presenter, granted by the Indian Patent Office.
- ₹90,000 UBA Government Grant for Buyoganic (Unnat Bharat Abhiyan scheme)
- 1st Rank, First Year, CSE (2022–23).
