VASUNDRAA S

Data Analyst | SQL, Power BI & Excel Analytics | Python, Machine Learning & Generative AI

Coimbatore, India | +91 7397785540 | s.vasundraa@gmail.com | linkedin.com/in/vasundraa-s | github.com/Vasundraa

PROFESSIONAL PROFILE

Computer Science Engineering graduate (B.E., 2026) specializing in Data Analytics and Machine Learning, with hands-on experience in SQL querying, Excel and Power BI dashboard development, and Python-based data analysis. Builds data pipelines and interactive dashboards that turn raw business data into clear, actionable insights.

Delivered data analytics projects spanning healthcare, retail, and manufacturing — including SQL-based healthcare revenue analytics, an Excel retail performance dashboard, and a deep-learning energy monitoring system reported in an IEEE conference paper. Combines this analytical foundation with full-stack software development experience across React JS, Django, and Firebase.

Currently completing a Data Analyst certification covering SQL, Excel, Power BI, Python, and Machine Learning at Anudip Foundation. Holds an NPTEL Cloud Computing certification (Elite + Silver, top 5% of candidates) and a Design Patent granted by the Indian Patent Office.

CORE SKILLS

Data Analytics & EDA	**SQL (Joins, CTEs, Window Functions)**	**Excel & Power BI (DAX, Power Query)**
Python, Pandas & NumPy	**Machine Learning (Regression, Trees)**	**Data Visualization (Matplotlib, Seaborn)**
Generative AI & LLM Fundamentals	**Prompt Engineering & RAG**	**Web Development (React JS)**
Databases (MySQL, Firebase)	**DSA, OOP & DBMS**	**Git & GitHub**

DATA ANALYTICS TRAINING

Data Analyst Course — Anudip Foundation

Anudip Foundation | Aug – Nov 2026 (Ongoing)

- Worked on healthcare data analysis using SQL, retail dashboards using Excel, and manufacturing performance dashboards using Power BI, covering data cleaning, transformation, KPI analysis, and business insights.
- Learned Excel formulas, lookup functions, PivotTables, SQL queries and joins, descriptive statistics, and probability, along with Power BI (Power Query, data modeling, DAX), Python, NumPy, Pandas, Matplotlib, Seaborn, and Machine Learning (Linear Regression, Logistic Regression, Decision Trees, Random Forest).

INTERNSHIPS

Software Development Intern — Cura

Cura | Feb – Sept 2025 (8 months)

- **Developed and enhanced real-time health-tracking and alert modules** for a patient-monitoring platform.
- **Worked on retrieving, displaying, and updating application data**, contributing to user-focused features and overall application usability.
- **Assisted in identifying and resolving issues in application features** to improve functionality and usability.

Frontend Development Intern — Pinesphere Solutions

Pinesphere Solutions | Mar – Apr 2024 (1 month)

- **Developed frontend features for the Shishu Aagaar** child health and nutrition application using React JS.
- **Implemented component-based interfaces** for infant growth tracking and baby-care information.
- **Created frontend forms** for entering and displaying infant health and nutrition details.

Project Intern — Pinesphere Solutions

Pinesphere Solutions | Jul – Aug 2023 (10 days)

- **Developed a Django-based web application** to record and track recycling and waste-collection data.
- **Worked with Python and Django** to implement backend functionality and support full-stack application development.
- **Implemented database-connected functionalities** to support storing and retrieving application records.

PROJECTS

EnergyMate — Smart Energy Monitoring System

Python, Deep Learning, Seq2Point CNN, React JS, Firebase

Challenge: appliance-level electricity consumption needed to be estimated without per-appliance sensors.

- **Contributed to an AI-based energy monitoring system** using Non-Intrusive Load Monitoring (NILM) to analyze appliance-level electricity consumption.
- **Developed the energy monitoring dashboard** to visualize appliance-level consumption and compare predicted versus actual power usage.
- **Contributed to research documentation and an IEEE conference paper** covering system architecture, methodology, and model evaluation.
- **Impact:** documented model evaluation results, including an MAE of 12.6 W in the reported evaluation.

MediCare — Healthcare Operations & Revenue Analytics

MySQL, SQL, Data Cleaning, Database Management

Challenge: fragmented, spreadsheet-based healthcare records needed to be structured and queryable for operational and revenue reporting.

- **Built a MySQL database from Excel source data**, designing tables, inserting records, and establishing relationships using primary and foreign keys.
- **Performed data profiling and cleaning**, identifying duplicates, nulls, inconsistent values, date formats, and billing/payment issues across healthcare records.
- **Analyzed operations and revenue data using SQL joins, filters, and aggregate queries** to answer BRD-based business questions and generate actionable insights.

FreshMart — Retail Sales Performance Dashboard

Microsoft Excel, Data Cleaning, PivotTables, Data Visualization, Business Analysis

Challenge: raw retail transaction data needed cleaning and a reporting layer to track revenue, profitability, and channel performance.

- **Cleaned and validated retail transaction data in Excel**, handling data-quality issues and preparing the dataset for analysis of sales, profit, products, complaints, and sales channels.
- **Built an interactive Excel dashboard** using PivotTables, charts, KPIs, and slicers to analyze revenue, profitability, product-category performance, and sales trends.
- **Impact:** identified key business trends and recommended growing the Mobile App channel, improving weekend sales, and prioritizing high-performing product categories.

Buyoganic — Full-Stack Recycling & Eco-Products Platform

Django, Python, PostgreSQL, HTML, CSS, JavaScript

Challenge: plastic-waste generators, recyclers, and bio-product makers had no unified plaVorm to coordinate collection and recycling.

- **Developed a full-stack platform** connecting plastic-waste generators, recyclers, and bio-product makers, enabling waste collection and recycling through a unified platform.
- Built PlastiCycle for truck tracking and scheduled waste collection, and Re-Gen Market to manage collected plastic categories and support the recycling workflow.
- Developed Eco-Choice Hub for discovering and ordering eco-friendly products, integrating Django and PostgreSQL.
- **Impact:** the project received a ₹90,000 UBA (Unnat Bharat Abhiyan) government grant.

CERTIFICATIONS & ACHIEVEMENTS

- NPTEL Cloud Computing — Elite + Silver Certification, scored 86% (Top 5% of candidates).
- Design Patent — Wireless Touch Laser Presenter, granted by the Indian Patent Office.
- ₹90,000 UBA Government Grant for Buyoganic (Unnat Bharat Abhiyan scheme).
- 1st Rank, First Year, CSE (2022–23).

EDUCATION

B.E. Computer Science & Engineering — **2026**
Dr. N.G.P. Institute of Technology
CGPA: 8.68 / 10

HSC — **2022**
Sri Chaitanya Techno School
Marks: 438 / 500 (87.6%)

SSLC — **2020**
Vidyaa Vikas International School
Marks: 450 / 500 (90%)
